

DevOps (Kraków) at Tectonic Interactive

Do you want to work with **multi award-winning team** whose technology powers viewer interaction on shows such as **The X Factor, The Voice of Australia and Match of the Day** through mobile apps, social media and the web?

Tectonic Interactive is looking for **DevOps**. If you're currently a junior DevOps who is looking for the next step-up, then this is, without doubt, the job that you should be applying for.

What you'll do:

Based in our Krakow office, you'll...

- Maintain platform availability in accordance with our SLAs (up to 99.99% during live events)
- Ensure Tectonic Systems are secure and auditable. Including meeting ISO27001 standards
- Benchmarking Tectonic Systems against security best-practice
- Use orchestration and configuration management tools to maintain and configure systems
- Develop custom / bespoke tooling
- Manage multiple environments (production, staging and test/dev)
- Become part of the 24/7 technical operations team with on-call, weekend and evening working on a rota basis

What you'll get back:

- A salary of PLN 8000 - 12000 on B2B contract (other forms also available)
- 20 or 26 days (dependent on experience) of paid holidays
- Potential to join our share ownership scheme
- We're a small team and we all come from a variety of backgrounds. As a result, we tend to learn a fair bit from each other every day
- Lots of banter over food; coffee; and maybe the odd beer

You'll be happy to roll up your sleeves and muck-in wherever you might be needed. You'll get that the 'show must go on', and in a weird kind of way you'll look forward to the next caffeine- and sugar-fuelled late night wrestling with the next challenge.

If this sounds like you, get in touch...

To find out more about Tectonic Interactive see www.tectonicinteractive.com/news

If you want to have an informal chat before you apply, please get in touch with our Principal Software Architect, Michal at michal.buczek@tectonicinteractive.com When you're ready, send your CV to us along with a short paragraph telling us a bit about yourself and why you're applying.

What we're looking for:

These should be your 'bread and butter':

- Knowledge and experience of administering and securing Linux systems
- Knowledge and experience of AWS components and services (in particular: CloudFormation and VPC)
- Knowledge of Puppet (or similar configuration management tool)
- Knowledge and experience of managing and administering databases (MySQL or PostgreSQL) and assessing their performance / suitability for real-time services

For some serious bonus points, you'll:

- Have worked with high traffic applications
- Have some experience of JavaScript and Node.JS
- Have experienced working for a 'big corporate' and are able to identify 'best practice' from 'bloated bureaucracy'

The formal stuff:

- Reporting to: Principal Software Architect
- Job Type: Permanent
- Location: Grzegórzecka, Krakow, Poland
- Flexible working (including working from home)
